# Sprint 3 Plan

**Product Name: SpeedFill** 

Revision Number: 1 Revision Date: 3/5

Sprint Period: Feb 11 - Feb 25th

**Goal:** Complete any remaining backlog from Sprint 2 while beginning development of the Google extension, focusing on job application autofill and data integration with the website. Ensure users can save and retrieve relevant information seamlessly across both platforms.

#### Task List (organized by user stories):

- 1. [Must Have] [Backlog] As a job seeker, I want to easily provide my personal and professional information so that I can receive relevant assistance in my job search. [6 Total Hours]
  - Task 1: Implement forms page with resume upload, job description box, and additional details area [6 Hours]
- 2. [Must Have] [Backlog] As a user, I want the website to remember my information so that I can avoid repeating tasks and save time [5 Total Hours]
  - Task 1: Migrate backend hook for adding and retrieving user data to Supabase[3 Hours]
  - Task 2: Migrate backend hook for authenticating users to Supabase [2 Hours]
- 3. [Must Have] [Backlog] As a user, I want to be able to access and reuse previous documents so that I can reuse and reference them later. [20 Hours]
  - Task 2: Write a backend hook for adding and retrieving PDFs [3 Hours]
  - Task 3: Implement dashboard UI [6 Hours]
  - Task 4: Connect dashboard to display user's associated info from Supabase [7 Hours]
  - Task 5: Migrate backend to use Supabase instead of Firebase [4 Hours]
- 4. [Must Have] [Backlog] As a user, I want clear and concise information so that I can easily apply the advice to my job applications. [9 Total Hours]
  - Task 1: Create a better AI prompt to answer additional questions [1 Hour]

- Task 2: Implement results components for cover letter and resume analysis [6 Hours]
- Task 3: Connect results components routing to forms interface and backend [2 Hours]
- Task 4: Redo the styling of frontend components with better css practices [4 Hours]
- 5. [Must Have] As a job applicant, I want to be able to automatically fill out job application pages so that I can save time. [11 Total Hours]
  - Task 1: Design a brand logo for the google extension [2 Hours]
  - Task 2: Design the UI for the google extension, login form and button to autofill page [4 Hours]
  - Task 3: Implement frontend components for the extension, including a popup interface for user interaction and login [2 Hours]
  - Task 4: Develop a script that scans job application web pages to detect input fields (e.g., name, email, experience, education) [3 Hours]
- 6. [Must Have] As a user, I want an extension to save my information so I can easily access relevant information about myself [4 Total Hours]
  - Task 1: Setup connection between google chrome extension and Supabase database to store and retrieve user information [2 Hours]
  - Task 2: Implement auth within extension to let users login [2 Hours]

#### **Team Roles**

- Charles Product Manager, Backend Developer
- Andy Frontend Developer
- Colin Frontend Developer
- Chan Backend Developer
- Raj Backend Developer

### **Initial Task assignment**

- Charles
  - o User Story 2 Task 1
  - **User Story 3** Task 1, 2, 4, 5
  - User Story 4 Task 3
- Andy
  - User Story 3 Task 3
  - o User Story 4 Task 2
  - **User Story 5 -** Task 1, 2, 3

- Colin
  - o **User Story 1 -** Task 1
  - **User Story 2 -** Task 1, 2
  - O User Story 5 Task 4
  - **User Story 6 1, 2**
- Chan
  - **User Story 4** Task 1, 2
- Raj
